[For student papers] Faculty Advisor:

Name of Advisor

ABSTRACT

The Abstract goes here. From Wikipedia: “An abstract is a brief summary of a research article, thesis, review, conference proceeding or any in-depth analysis of a particular subject and is often used to help the reader quickly ascertain the paper’s purpose.” In other words, the abstract states what is inside the paper.

INTRODUCTION

The Introduction goes here. The Introduction introduces readers to the paper. It might include some background information (including a brief literature review), why the paper was written, what the paper is for, for whom it was written, and a brief outline of its main contents/sections.

THE BODY

You should add sections to organize your paper as needed. Typically there is a lot of text, some equations, and some figures and tables as needed. With LaTeX, the template formats a lot of things for you, and so we will just include a few representative examples of equations/figures/etc. Keep in mind there is a 10-page limit for papers at ITC. Here are some citations of a single item [1] and multiple items [2, 3, 4, 5, 6, 7], notice that these include examples of conference papers, journal papers, etc.

Here is an example of an equation

$$E = mc^2. \tag{1}$$

That equation ended its sentence, so it has a period at the end. We can reference (1) by using its number. An example figure is shown in Figure 1, where we again reference something using its number.

Figure 1: Downsampling operation.

NUMERICAL RESULTS

Once again, you should add sections as needed. Although it is not required, oftentimes a paper will contain some kind of numerical performance results.

CONCLUSIONS

This is where you give your final word on what you have written. Now that you have completely developed everything, you want to make sure the reader understands its value and how they benefit from it. You might also connect your paper’s findings to a larger context, suggest the implications of your findings, suggest future work, or revisit your paper’s original question with the new insights you have presented.
